DATA SCIENCE ASSIGNMENT

Day - 15:

1. What does descriptive statistics aim to achieve in data analysis?

2. In Pandas, what is the primary data structure used for handling tabular data?

3. Which Matplotlib function is commonly used to create a histogram in Python?

4. Create a line plot using Matplotlib to show the trend of sales over months. Assume you have the data for months and corresponding sales.

5. Write a Python script using Matplotlib to create a pie chart representing the distribution of expenses in a budget. Assume you have categories and corresponding Expence percentages.
