

# DATA SCIENCE ASSIGNMENT

## Day - 69:

**1. In which of the following applications can autoencoders be effectively used?**

**2. What is the primary benefit of using transfer learning in deep learning?**

**3. How does transfer learning enable the training of deep neural networks with comparatively little data?**

**4. What is the role of sparsity regularization in autoencoders, and how can it be implemented to encourage the learning of a sparse representation? example**

**5. Explain the role of hyperparameters in Transfer Learning, and how Would You select appropriate values for them?**
