

Apache Pig Load & Store Built-In Functions

Load & Store Functions

Apache Pig supports various type Load & Store Functions such as "pigstorage", "textloader" "binstorage" and handling compression which are used to decide how data will reside in pig and comes out. These functions are used with load and store operators.

The following is the list of Apache Pig supported LOAD and STORE functions.

S.No.	Functions	Description
1	PigStorage()	This function is used to load and store structured files.
2	TextLoader()	This function is useful in loading the unstructured data.
3	BinStorage()	This function is used to load and store data into Pig using the machine-readable format.
4	Handling Compression	This function is used to load and store compressed data.
