

365 DataScience Obtaining Descriptive Statistics about the Data

Step 1 Libraries import

```
# use the well-known convention  
import pandas as pd
```

Step 2 Import the dataset

```
data = pd.read_csv('Location.csv', squeeze = True)  
new_data = data.copy()  
new_data.head()
```

```
0      Location 3  
1      Location 6  
2      Location 8  
3     Location 26  
4     Location 34  
Name: Location, dtype: object
```

Step 3 Obtain descriptive statistics about the dataset

```
new_data.describe()  
  
count          1043  
unique           296  
top      Location 25  
freq              31  
Name: Location, dtype: object
```
